Instance variable and class variable

①

Instance variable

An instance variable belongs to a specific object.

Each object has its own separate copy.

Example in a classroom

Every student has

- different name
- different roll number
- different marks

this is instance variable

Change from student to student

- defined inside init using self

Class Student:

school_name = "ABC school"

def __init__(self, name, roll):

self.name = name

self.roll = roll

s1 = Student("Kish", 1)

s2 = Student("Rahul", 12)

Print(s1.name) # Kish

Print(s2.name) # Rahul

Class variable

A class variable belongs to class itself.

It is shared by all objects.

Example All student in a school share

- school name
- school address
- same uniform color

defined inside class
